Professional Summary

Software engineer with 8+ years of experience building Java services and full-stack applications. Modernized Struts applications with Angular and Spring Boot, deployed services to AWS, and cut database call time by over 30% for EY. Current work at American Express focuses on AI agents for test automation and production support.

Technical Skills

Backend Java, Spring Boot, Spring WebFlux, Vert.x, Hibernate/JPA, REST APIs, Apache Kafka
Full stack Angular, TypeScript, JavaScript, SQL, PostgreSQL, Microsoft SQL Server
Cloud and CI/CD AWS (ECS, RDS, S3), Docker, Kubernetes, Jenkins, Git, Azure DevOps
Testing and AI JUnit, Mockito, Cucumber, AI agents, Claude, OpenAI Codex, GitHub Copilot, Cursor

Professional Experience

Software Engineer | American Express

May 2026 – Present

- Built a testing agent that automates repetitive QA/QE checks, reducing the time engineers spend running tests manually.
- Built a speech-recognition agent so engineers can review what was said in technical meetings while investigating production issues.

Software Engineer | Excellent Pro Group Inc.

Mar 2025 – Apr 2026

- Migrated Struts applications to an Angular frontend and Spring Boot REST APIs. Tuned SQL queries and configured database connection pooling on Amazon RDS.
- Integrated generative AI APIs into backend services. Built agents for QA automation and for analyzing meeting discussions during production investigations.
- Tested Java services with JUnit and Mockito, packaged them in Docker, and deployed them to Amazon ECS through Jenkins CI/CD pipelines.

Software Engineer | American Express

Aug 2024 – Feb 2025

- Developed Java microservices for real-time financial transactions using the Vert.x event loop for asynchronous processing. Investigated production defects and traced their root causes.
- Translated transaction requirements into Cucumber scenarios with stakeholders and wrote JUnit tests for the underlying services.

Professional Experience Continued

Software Engineer | Launch by NTT DATA (Nexient)

Feb 2020 – Jul 2024

- **EY.** Reduced database call time by over 30% by tuning Hibernate/JPA queries and adding indexes. Built Spring WebFlux APIs secured with OAuth 2.0 and used Kafka for asynchronous messaging.
- **The Home Depot.** Built Spring Boot services for inventory tracking and replenishment. Achieved over 85% unit test coverage with JUnit and Mockito, and used JMeter to test throughput under peak load.
- **PatientKeeper.** Developed patient intake, charting, and prescription tracking modules with Angular and Spring Boot. Integrated encrypted AWS S3 storage for patient documents.
- **Automated Financial Systems.** Modernized Java and JSP workflows while preserving existing financial rules. Led code reviews and paired with developers on the changes.
- **FHL Bank.** Updated a Liferay intranet for bank staff and tuned SQL Server stored procedures to reduce page load times.

Java Developer | Three Monks Pvt. Ltd.

Mar 2014 – Jun 2016

- Built Spring MVC APIs that connected accounting, HR, and inventory for SmartBiz ERP. Contributed to releases rolled out to more than 30 small and midsize businesses.
- Improved financial transaction efficiency by over 35% by restructuring the SQL Server schema and refactoring stored procedures and joins.
- Set up test data and mocked services for the QA team, helping shorten its testing cycle by 20%.
- Implemented single sign-on and role-based access across ERP modules with Spring Security and LDAP.

Projects

StockScope

Built a Next.js and FastAPI application for searching SEC filings and comparing reported company figures. Combined keyword and vector search with PostgreSQL, Qdrant, and Ollama. Persisted research jobs in a SQL queue so users can reload the page and return to a report in progress.

StockScope case study

Education

Master's in Information Technology University of the Cumberlands, 2020

Bachelor's in Computer Science and Information Technology Tribhuvan University, 2014
